CLAIMS

What is claimed is:

1. A method comprising:

   providing access to a set of products available for electronic ordering;

   monitoring products ordered by a user; and

   providing, automatically, to the user access to a list of products previously ordered.

2. The method of claim 1 wherein the list of products previously ordered is categorized.

3. The method of claim 1 further comprising reordering a product in response to the product being selected from the list.

4. The method of claim 3 wherein reordering the product further comprises:

   determining a location to which the product was previously shipped;

   verifying the location; and

   causing the reordered product to be shipped to the location;

5. The method of claim 3 further comprising suggesting additional products to the user based on the product selected for reorder.

6.   A machine-readable medium having instructions stored thereon to implement an electronic commerce World Wide Web page, the sequences of instructions, when executed by one or more processors, cause one or more electronic systems to:

    provide access to a set of products available for electronic ordering;

    monitor products ordered by a user; and

    provide, automatically, to the user access to a list of products previously ordered.

7.   The machine-readable medium of claim 6 wherein the list of products previously ordered is categorized.

8.   The machine-readable medium of claim 6 further comprising sequences of instructions that, when executed by the one or more processors, cause the one or more electronic systems to reorder a product in response to the product being selected from the list.

9.   The machine-readable medium of claim 8 wherein the sequences of instructions that cause the one or more electronic devices to reorder the product further comprise sequences of instructions that, when executed by the one or more processors, cause the one or more electronic systems to:

    determine a location to which the product was previously shipped;

    verify the location; and

    ~~cause the reordered product to be shipped to the location;~~

1   10.   The machine-readable medium of claim 8 further comprising sequences of

2   instructions that, when executed by the one or more processors, cause the one or more

3   electronic systems to suggest additional products to the user based on the product

4   selected for reorder.

1   11.   An apparatus comprising:

2   means for providing access to a set of products available for electronic ordering;

3   means for monitoring products ordered by a user; and

4   means for providing, automatically, to the user access to a list of products

5   previously ordered.

         12.   The apparatus of claim 11 wherein the list of products previously ordered

is categorized.

1   13.   The apparatus of claim 11 further comprising means for reordering a

2   product in response to the product being selected from the list.

         14.   The apparatus of claim 13 wherein the means for reordering the product

2   further comprises:

3   means for determining a location to which the product was previously shipped;

4   means for verifying the location; and

5   means for causing the reordered product to be shipped to the location;

1   15.   The apparatus of claim 1 further comprising means for suggesting

2   additional products to the user based on the product selected for reorder.

1   16.   A networked server device comprising to provide information related to

2   products available for ordering by a user of a client device coupled to the server, the

3   server device to monitor products ordered by users that access the server device and to

4   record products ordered by the users, wherein the server device provides one or more

5   individual users with a list of products previously ordered by the respective users.

1   17.   The server device of claim 16 wherein the list of products previously

2   ordered is categorized.

1   18.   The server device of claim 16 wherein the server reorders a product in

2   response to the product being selected from the list.

1   19.   The server device of claim 18 wherein the server device reorders the

2   product in response to the product being selected from the list, and determines a location

3   to which the product was previously shipped, verifies the location, and causes the

4   reordered product to be shipped to the location.

1   20.   The server device of claim 18, wherein the server device suggests

2   additional products to the user based on the product selected for reorder.
